Release Note Cloud | EYESEE Cloud Version 1.16

Release Note Cloud | EYESEE Cloud Version 1.16 2
Functional improvements 4

- Dashboard / Customer report : Added CSV download of Dashboard and Customer Report data 4
- Dashboard: Enhanced dashboard PDF graphics display 5
- Dashboard: Pre-selected dates of the month (from day to day) preceding the current day for the dashboard and customer report calendars. 6
- On-line help: Change of visual of on-line help button 7
- Users: list of certified users and addition of training certificates for each trained user 8
- Add maintenance date for drone(s) 10
- Zone : 'Root' zone name added 11
- Scanner acquisition: improved description of empty slot definition 13

The description of the definition of an empty scanner acquisition slot has been modified, and a tooltip containing 2 diagrams of 2 different examples has been added for greater clarity. 13

- Mission creation/modification: automatic mission naming option added 14
- Mission list : Default display of missions by modification date (most recent missions at the top of the list) 15
- 404 page redesign 16
- Clearer error if a network failure occurs during an action 17

Corrective action 18

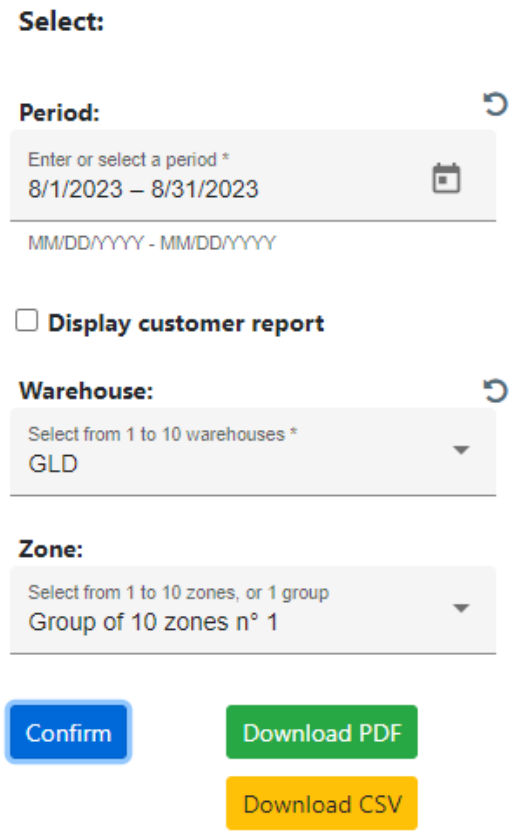
- One-sided view: correction of tooltip placement 18
- Creating/modifying a face: deleting levels could delete location names 19
- Mission creation/modification: users can save if they have not selected columns or locations 20
- Mission creation/modification: a mission that begins with a prohibited location cannot be registered. 21
- Mission creation/modification: for missions with column selection, creation was impossible if the 1st column had more levels than the 2nd selected column 22
- Mission carried out: the dates and times of the executions and acquisitions were offset 23
- Mission executed - CSV export: when exporting errors only, without Excel compatibility, "EMPTY" locations were also included. 24
- Mission carried out: the following error search took into account the locations whose photos are in error 25

– Mission executed: sorting of missions by execution date did not work when the checkbox "Display missions with deactivated faces" was selected. 26
– English: Compte: family name translation 27
– English : Account: translation of disconnection 28
– English: Face: Face translation 'deactivated' corrected 29

Functional improvements

– Dashboard / Customer report : Added CSV download of Dashboard and Customer Report data

It is now possible to export the dashboard and customer report in CSV format. In this case, only results or total data in numbers are displayed, not percentages.



EYESEE Cloud - Dashboard
Period: 08/01/2023 - 08/31/2023

	Nb of visited 'pallet'		Nb of mandatory coc		Nb of empty 'pallet'		Nb of re-do		Nb of operator move		Total time (in s) for all visited 'pallet' locations	
Selection	Visited	Total	Visited	Total	Visited	Total	Visited	Total	Visited	Total	Visited	Total
Root zone	0	312	0	0	0	0	0	0	0	0	0	0
Inventaire a l aveugle	592	628	121	903	412	904	0	0	0	0	0	0

EYESEE Cloud - Dashboard
Period: 08/01/2023 - 11/20/2023

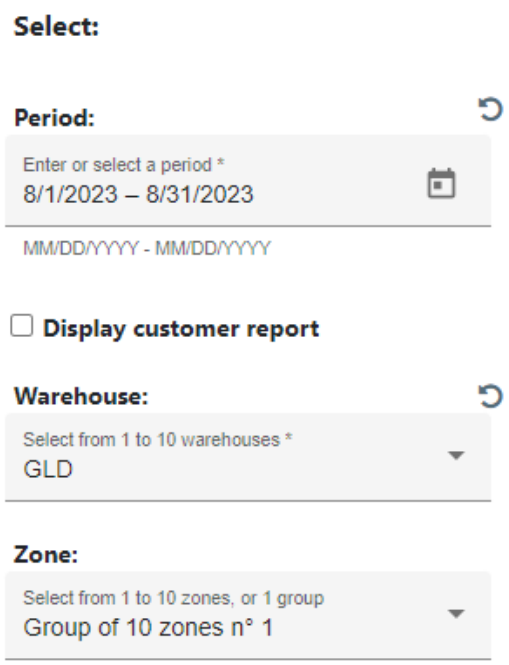
	Nb of visited 'pallet'		Nb of mandatory coc		Nb of empty 'pallet'		Nb of re-do		Nb of operator move		Total time (in s) for all visited 'pallet' locations	
Selection	Visited	Total	Visited	Total	Visited	Total	Visited	Total	Visited	Total	Visited	Total
Root zone	0	0	0	0	0	0	0	0	0	0	0	0
GLD Régis	39	1209	2	103	47	103	13	103	10	103	0	103
GLD Zone Erwan	0	324	0	0	0	0	0	0	0	0	0	0
GLD_Zone_Test	0	132	0	0	0	0	0	0	0	0	0	0
Zone A	0	152	0	0	0	0	0	0	0	0	0	0

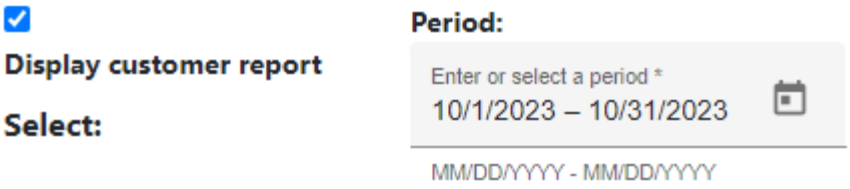
– Dashboard: Enhanced dashboard PDF graphics display

The size of the graphics in the dashboard PDF could be different depending on the size of the screen from which it was downloaded. This has been corrected so that the charts in the PDF are always the same size.

– Dashboard: Pre-selected dates of the month (from day to day) preceding the current day for the dashboard and customer report calendars.

When the 'Dashboard' page is displayed, dates are pre-selected: the end date is today's date, and the start date is 30 days earlier. This preselection is identical for the customer report.





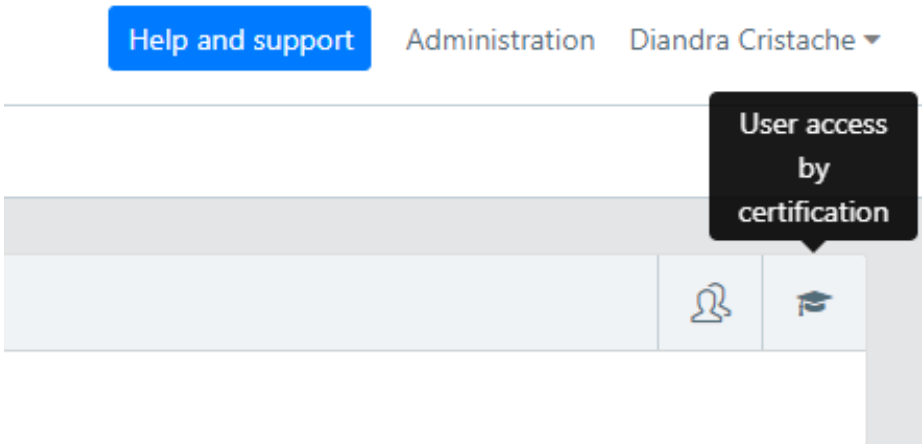
– On-line help: Change of visual of on-line help button

The '?' icon was unclear and difficult to identify when accessing online help. It has been replaced by a visible blue button.

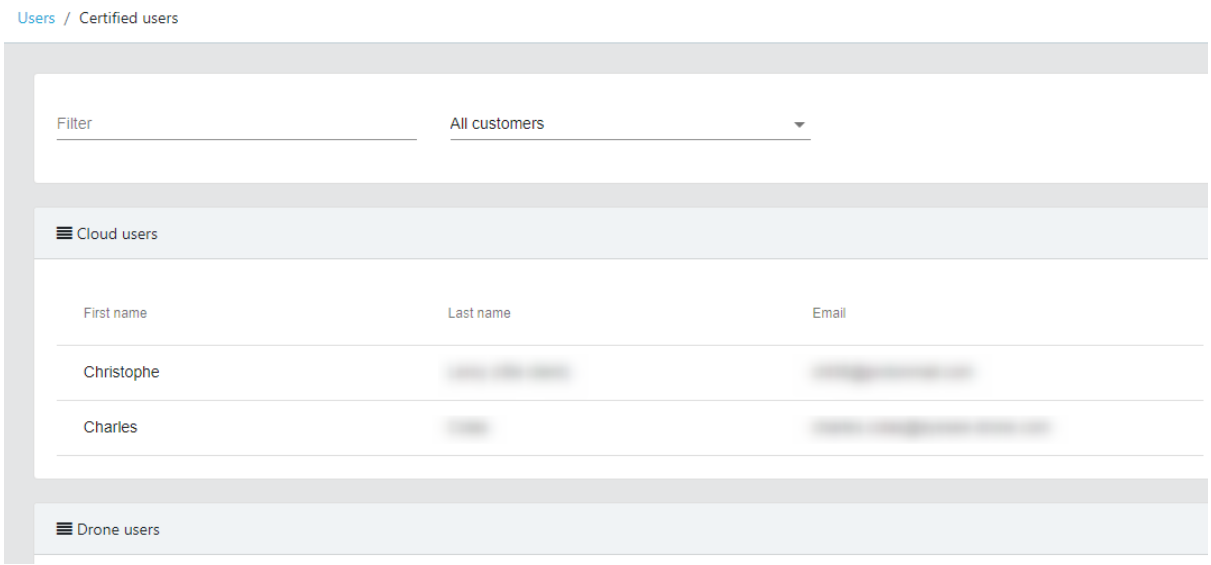
– Users: list of certified users and addition of training certificates for each trained user

From the user list, it is possible to list users according to whether or not they are Cloud and/or Drone certified.

It may take a few days from the delivery date for the message to appear in your space.

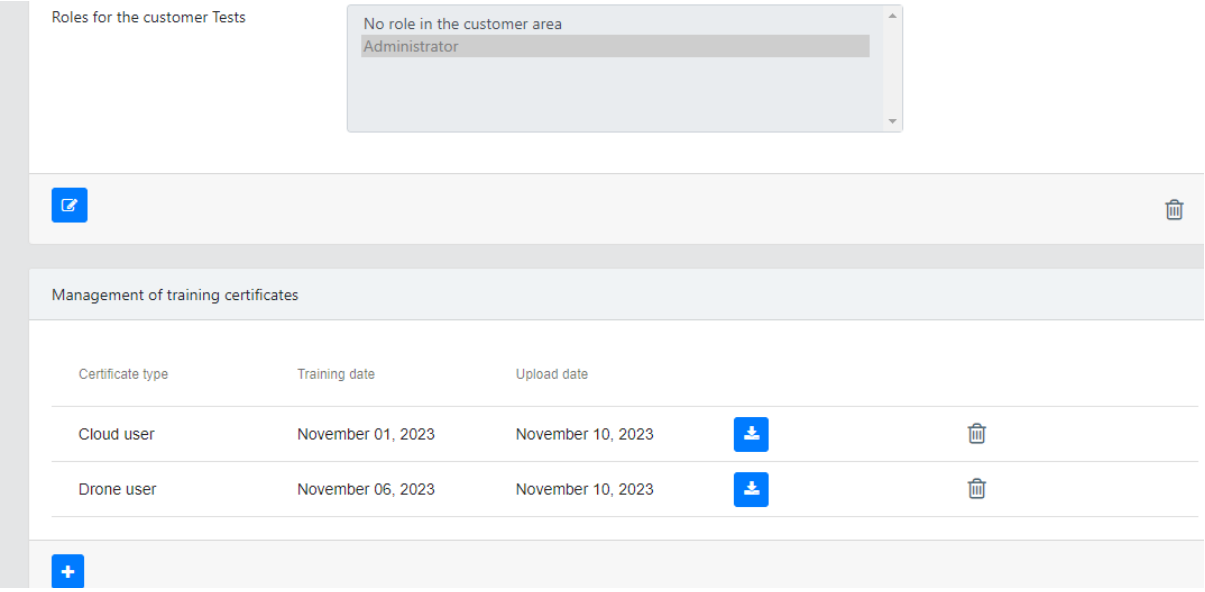


In this case, the users of the space are grouped into several tables according to their type of certification (cloud user, drone user, cloud trainer, drone trainer) or their non-certification:



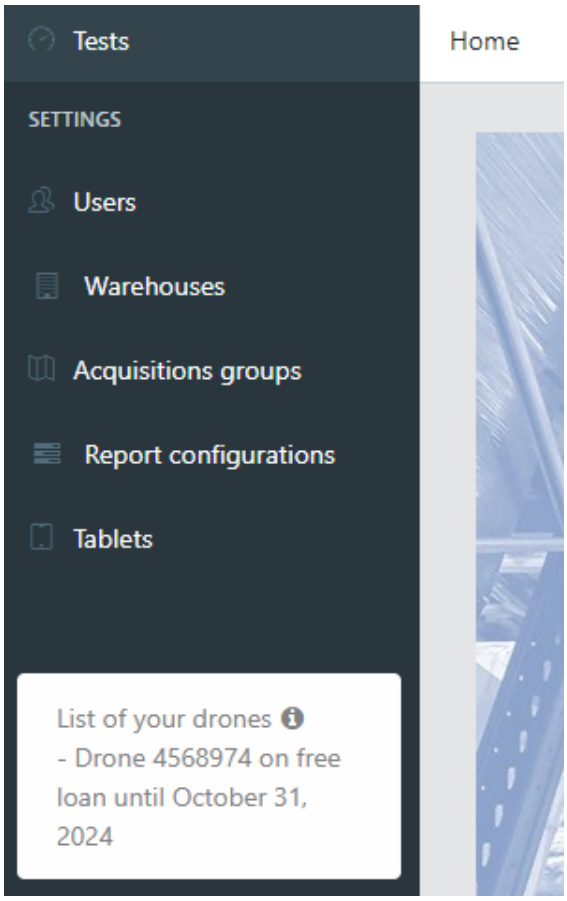
By clicking on a user, a table listing his certificates is displayed, with the option of downloading his certificate in PDF format at any time.

If there are older certificates, they will also be displayed.



– Add maintenance date for drone(s)

List of drone(s) added to left-hand menu. The date is displayed in red one month before the end of the subscription date.

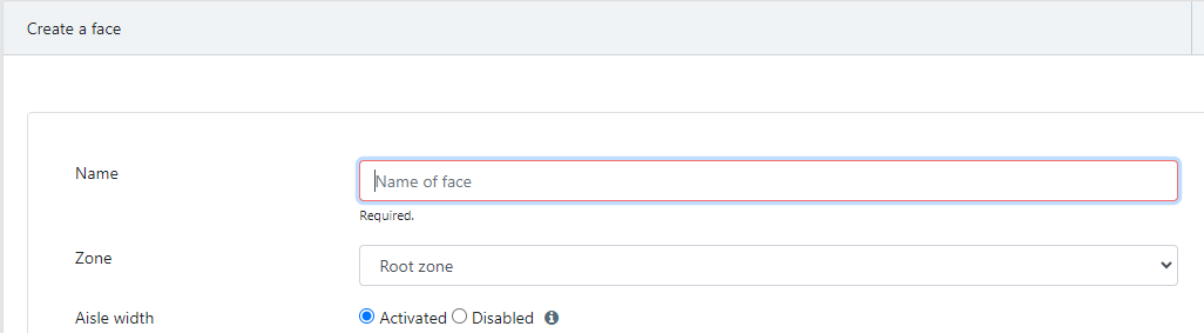


– Zone : 'Root' zone name added

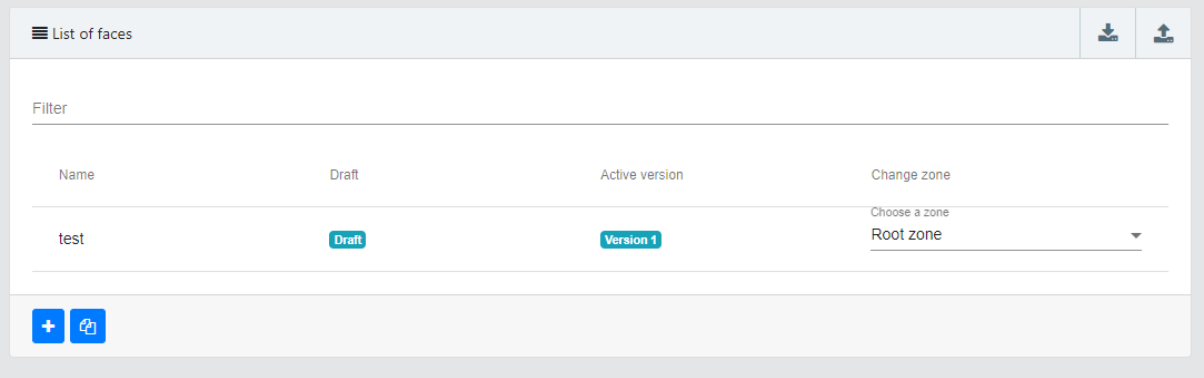
Root zone' or 'Root' has been added in place of empty fields / or 'not in a zone'.

This name may appear :

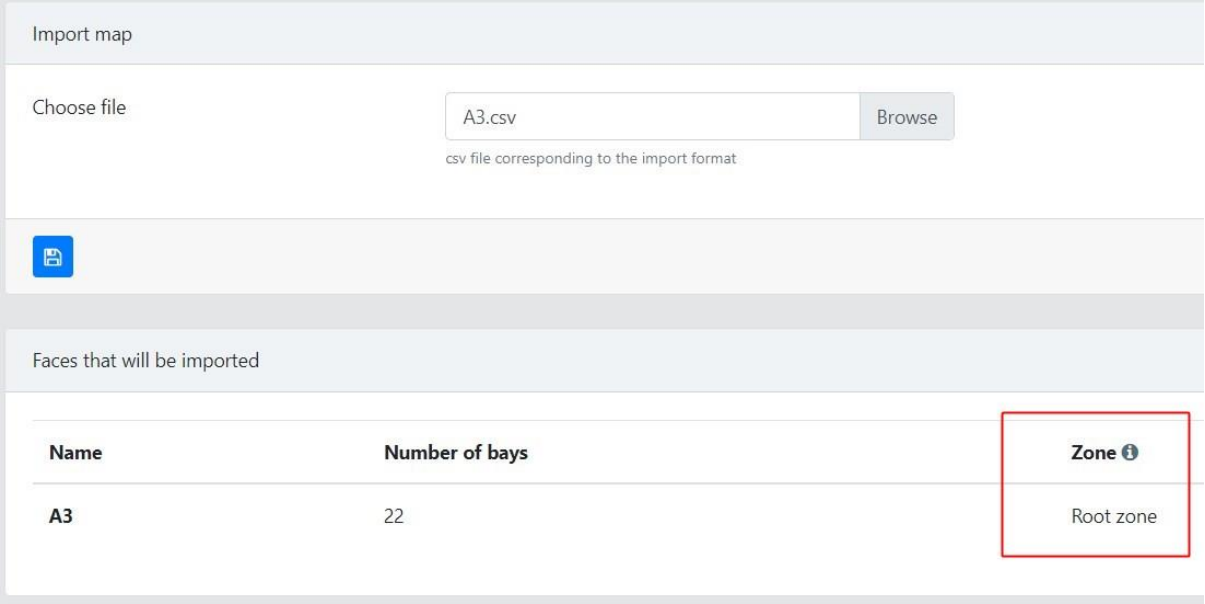
- When creating a face :



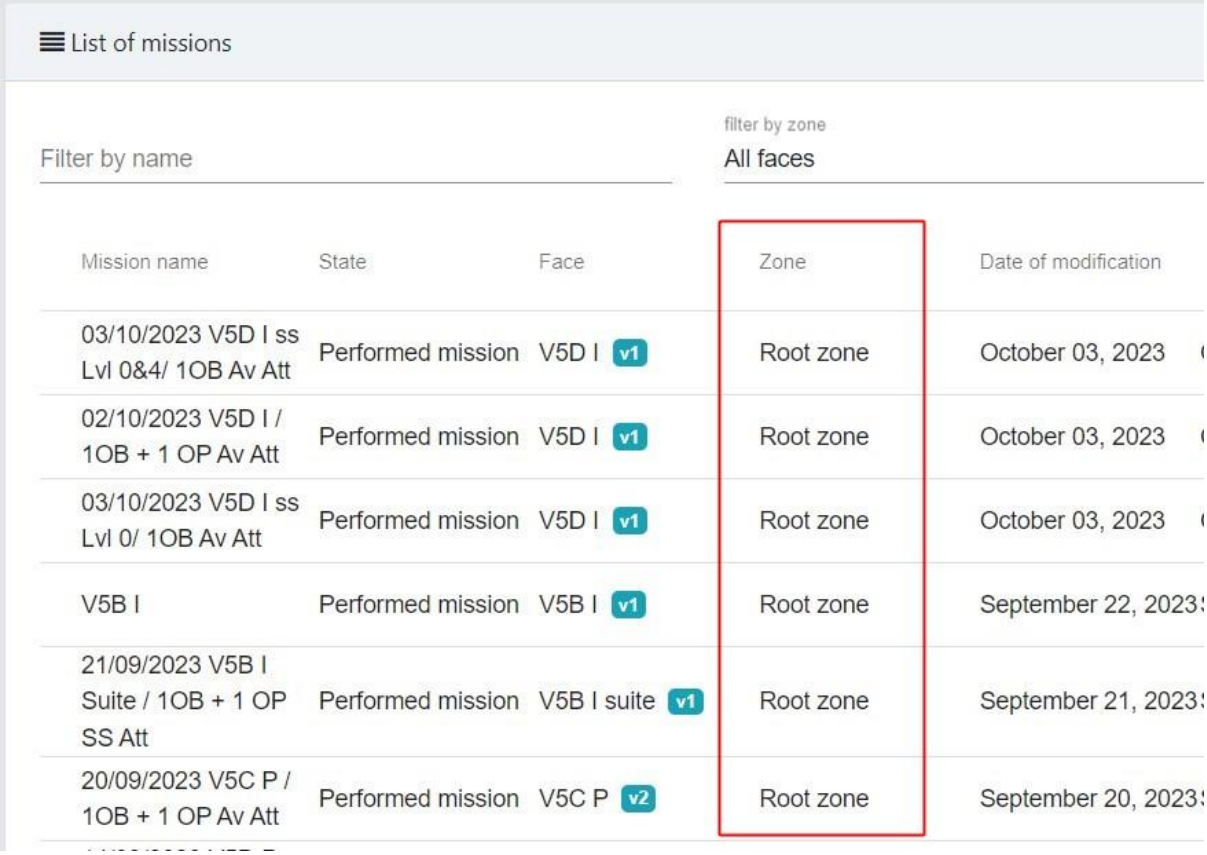
- In the drop-down list for changing zones on one side, the name 'Root zone' appears.



- When importing a CSV file to create a new face, the name 'Root zone' appears.

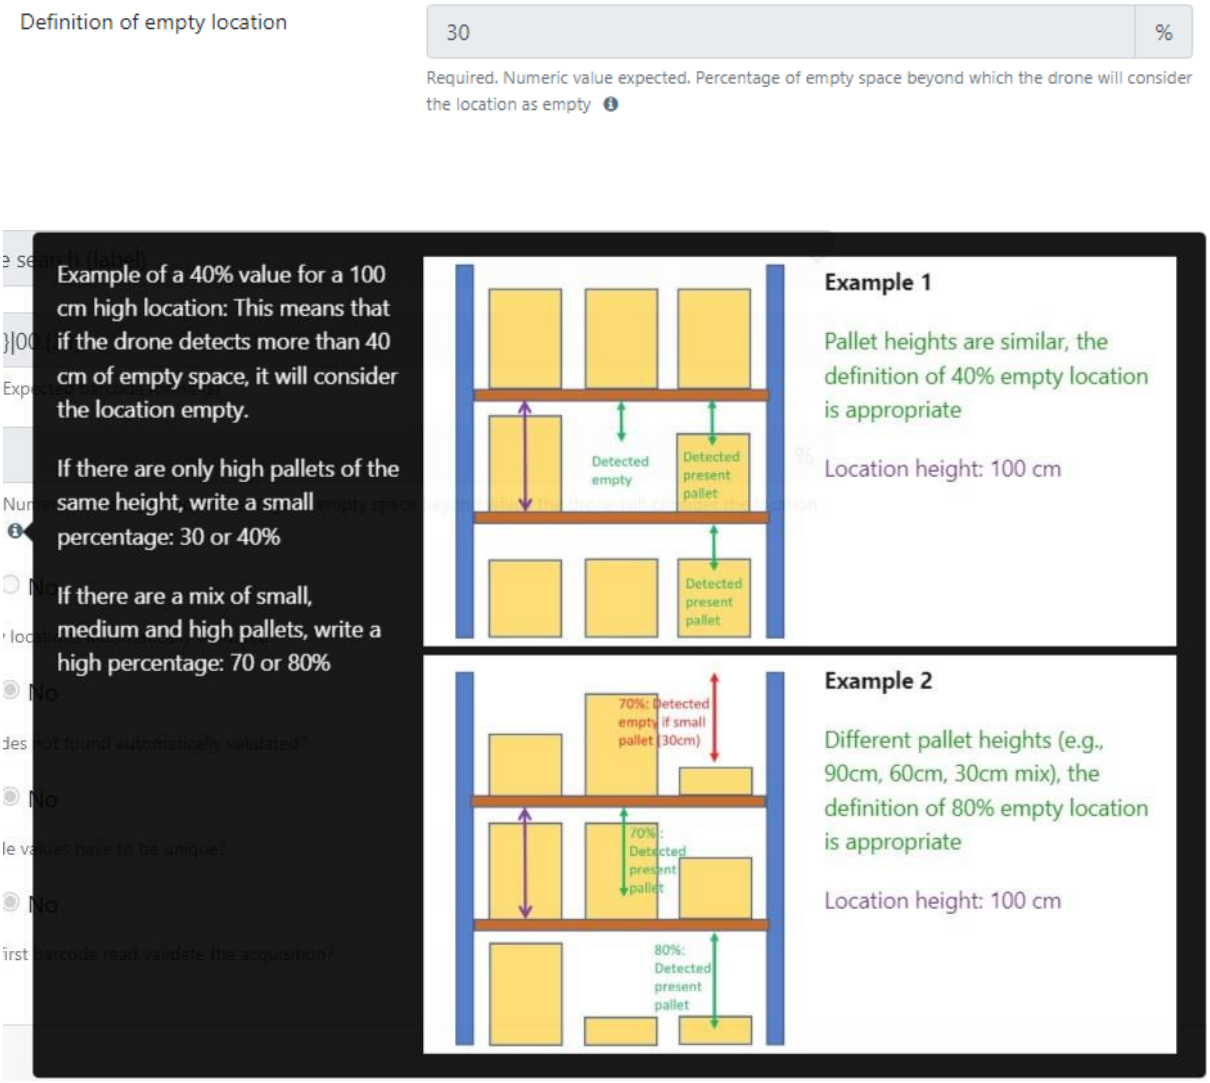


- In the mission list, the name 'Root zone' appears in the zone column, as well as in the drop-down list for filtering by zone.



– Scanner acquisition: improved description of empty slot definition

The description of the definition of an empty scanner acquisition slot has been modified, and a tooltip containing 2 diagrams of 2 different examples has been added for greater clarity.

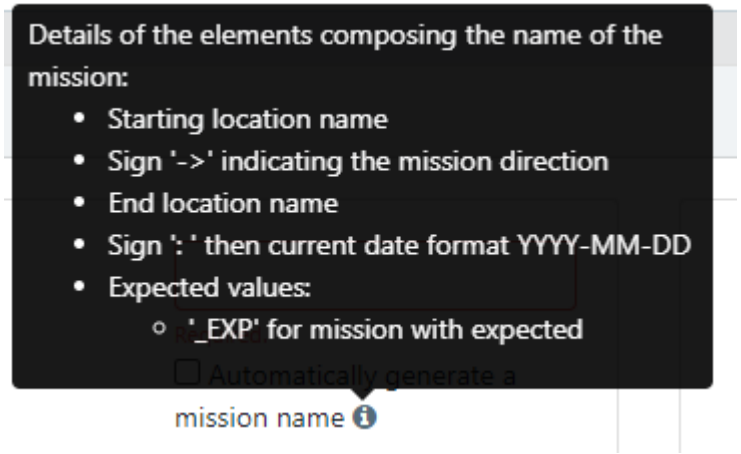


– Mission creation/modification: automatic mission naming option added

It is now possible to check an option when creating a new mission to automatically generate a name for the mission based on the elements selected.

Explanations of the elements of the name can be found in the tooltip by hovering the mouse over the small 'i'.

This option is also available when modifying an existing mission that has not yet been retrieved.



The mission name is displayed dynamically according to the configuration choices made when the mission was created (type, direction, with or without expectations, neutralized levels, etc.).

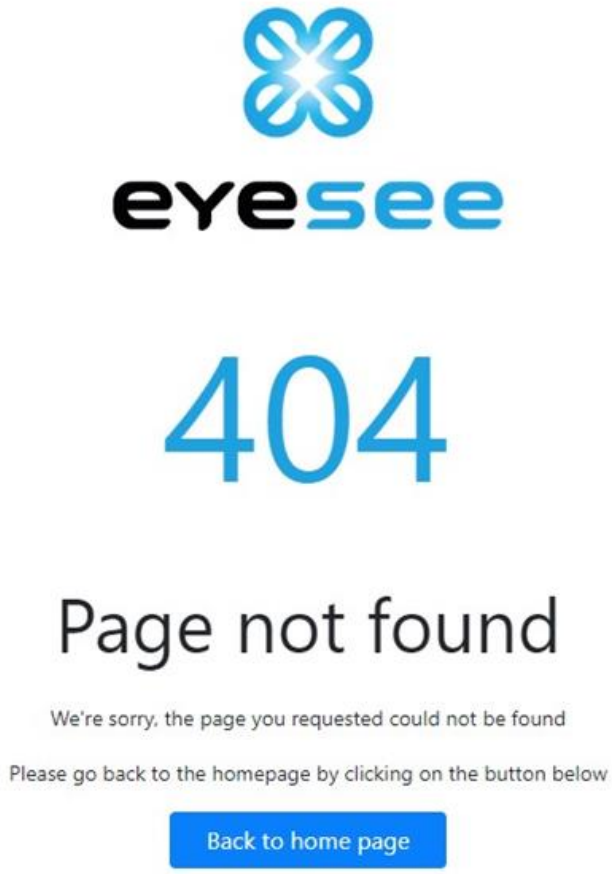
For jobs created before this delivery, and which can be modified: by modifying it and checking this option, the name will be updated and you can save the job with the same name format.

- Mission list : Default display of missions by modification date (most recent missions at the top of the list)

In the mission list, the most recent missions now appear at the top of the list, and the oldest at the bottom. Previously, the reverse was true.

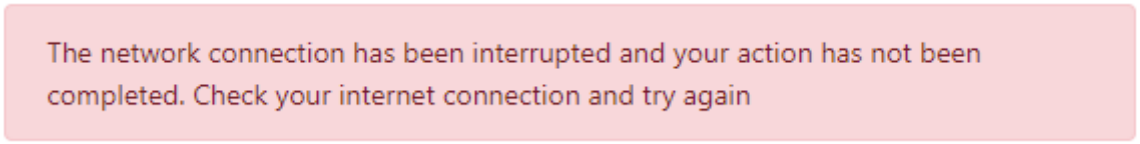
– 404 page redesign

The 404 page has been redesigned. It includes a redirect link to the home page.



– Clearer error if a network failure occurs during an action

In the event of a network connection failure during a create/modify/delete action, the following error is now displayed:

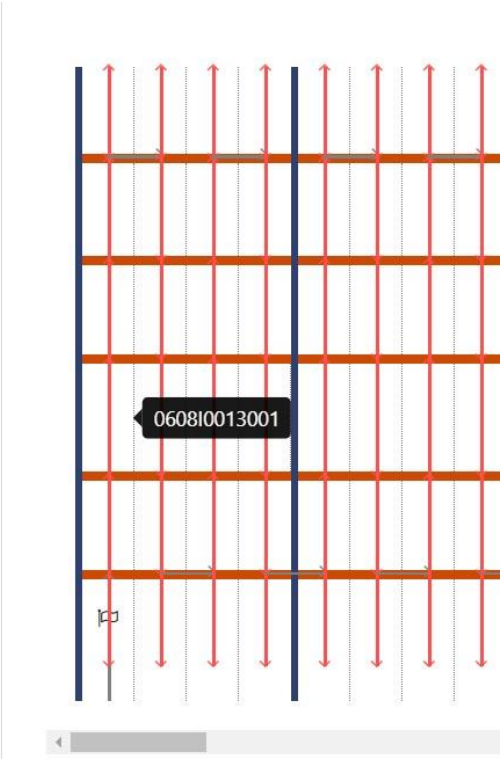


Corrective action

– One-sided view: correction of tooltip placement

When hovering the mouse over certain locations, the tooltip was incorrectly positioned. This has now been corrected.

By clicking on the 'Route' option, the tooltip is also positioned correctly, containing only the location name (and no longer the x and y coordinates).



– Creating/modifying a face: deleting levels could delete location names

In the 'Modify bays' section, when creating or modifying a face, reducing the number of levels could also delete the location names. This has now been corrected.

- Mission creation/modification: users can save if they have not selected columns or locations

It used to be possible to save a new or modified job without the user having to select the columns or locations of the new job.

The save button is now disabled until the selection has been made.

- Mission creation/modification: a mission that begins with a prohibited location cannot be registered.

If a mission starts at a no-fly location, a message is now displayed and the mission cannot be saved. This is because the drone is not allowed to fly in front of a location that has a no-fly constraint, so it can't take off in front of it.

- Mission creation/modification: for missions with column selection, creation was impossible if the 1st column had more levels than the 2nd selected column

This has been corrected, and it is now possible to create a mission by columns with different column levels.

– Mission carried out: the dates and times of the executions and acquisitions were offset

Start and end dates and times in the run list are now displayed according to the user's time zone, as are acquisition dates and times.

Only the "yyyy-mm-dd-hh-mm-ss-mss" date format does not convert the date according to time zone. It corresponds to the date and time in UTC-0 format.

- Mission executed - CSV export: when exporting errors only, without Excel compatibility, "EMPTY" locations were also included.

This has now been corrected. EMPTY' locations are no longer considered errors and no longer appear in the file.

With the exception of 'EMPTY' detected when a code was expected, as part of a mission with expectations. In this case, an error will appear in the file.

– Mission carried out: the following error search took into account the locations whose photos are in error

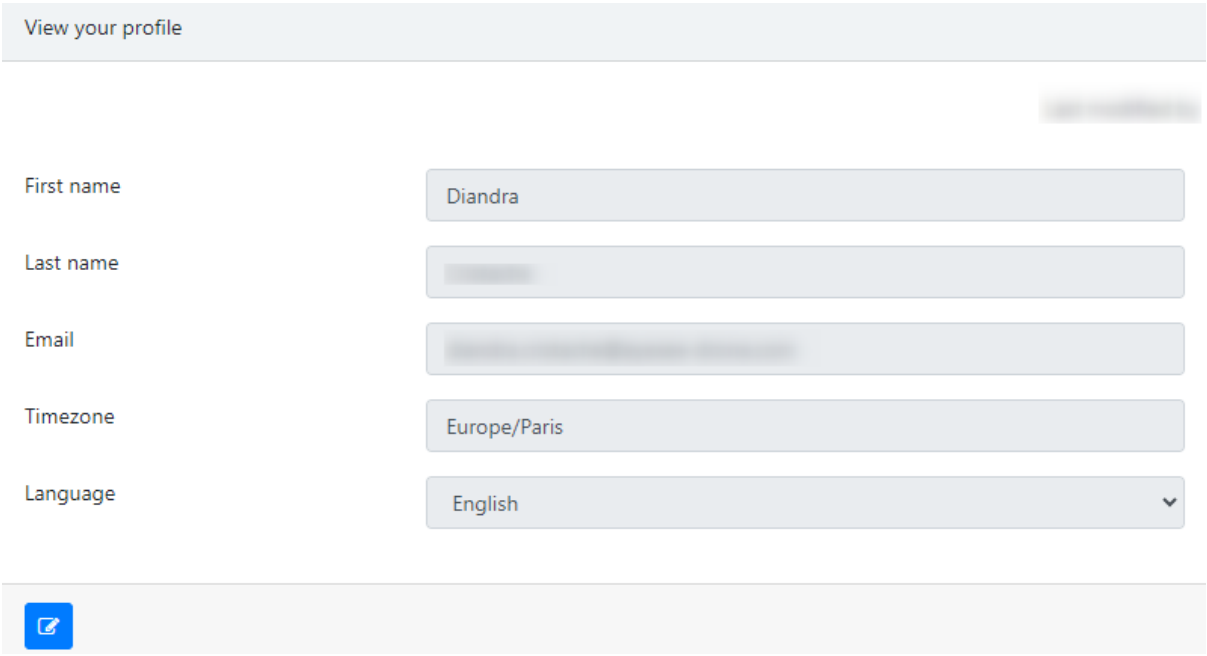
From now on, the search for the next error will focus on scans only.

- Mission executed: sorting of missions by execution date did not work when the checkbox "Display missions with deactivated faces" was selected.

This has been corrected: sorting jobs by execution date works regardless of selection.

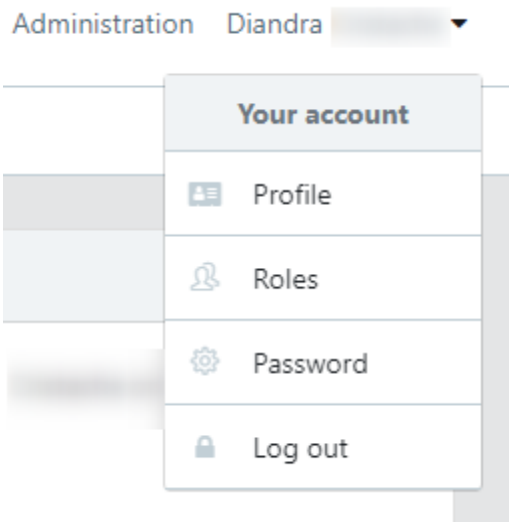
– English: Compte: family name translation

In English, the translation of the surname was 'surname'. The surname now appears as 'lastname'.



– English : Account: translation of disconnection

In English, the translation for logging out was 'sign out', now it's 'log out'.



– English: Face: Face translation 'deactivated' corrected

A 'deactivated' face used to be translated as 'deactivated', and is now translated as 'disabled'.

It is also displayed in the face list and mission list as follows:
