Release Note

EYESEE Cloud Version 1.18

June 2024

Release note| EYESEE Cloud Version 1.18

To enhance your EYESEE experience and ensure continuous improvement, we have integrated new features and made updates within the EYESEE Cloud application.

The improvements featured in the **June 2024** delivery of **version 1.18** are as follows.

1. Login

— Fixes

Emails entered during authentication are no longer case-sensitive.

On the first connection, scrolling to the "EYESEE Cloud Terms and Conditions" window no longer closes by accident.

2. Client report

— Add-ons

Error and blank graphics added for faces.

— Fixes

The width is always the same for bars in face graphics.

3. Warehouse preferences

— Add-ons

Number of characters of the face added in the naming to create a new inventory (see inventory section below).

Ability to view and export the execution report with one line per location (previously one line per scan), set to "yes" by factory default.

For newly created depots, the default value is "yes" for "Add header line to exports".

— Removals

Deletion of the "Display scanner acquisitions in red if the expected code is different from the code read" parameter.

4. Face

— Add-ons

Face renaming is now possible, on condition that the new name does not correspond to an existing face in the same warehouse.

— Fixes

For faces disabled in a zone, the "disabled" tag was not displayed.

When creating a face, the 'Add part' button is disabled if the form is incomplete.

5. Mission

— Add-ons

New option to group missions in a directory.

Multiple deletion of missions added for non-recovered and recovered missions. For executed missions, it is still necessary to delete them individually.

— Removals

Horizontal path no longer available when creating or modifying a mission.

— Fixes

Sorting of executions works again.

Mission creation and modification: It was possible to save a mission while the face was loading, triggering an error.

6. Executed mission

— Add-ons

New icon for codes read that do not match expected codes.

New status for executed missions: "Unverified", "In progress" or "Verified".

New option to modify the expected codes for a location on a mission with an executed expected code.

In the report configuration, when error export is selected, the acquisitions shown in the table are only those in error.

New status message and comments when viewing a location. This information is systematically added to the results export.

Links to download photos of a location have been added.

More details in the following video: ▶ https://youtu.be/uat1XjvHUT8

---

7. Inventory

— Add-ons

New inventory feature: It is now possible to create multiple missions on different faces from a list of expected codes saved by the application. This feature includes the automatic creation of missions from this list.

More details in the following video: ▶ https://youtu.be/0gx5Ynv2GGE

---

8. Other

— Add-ons

Display of a "New" button next to the user's name, redirecting the user to the latest updates.

Interface modernization: new icons, new buttons, popup notifications when an action has been performed, etc.
