DRONES

SCISSOR LIFTS

ADVANTAGES

REDUCED DOWNTIME

Days of downtime for inventory are easily halved.

SAFE ACCESS TO HEIGHTS

Racks at height can be safely controlled, without the need for PPE, remote control licences or CACES.

MULTIPLIED PRODUCTIVITY

Productivity multiplied by a factor of 10, with 500 locations inspected per hour per drone and per person.

AUTOMATED DATA COLLECTION

Scanners, ultrasonics sensors and cameras collect data automatically and reliably: empties/fulls, addressing, photo evidence, abnormalities.

ACCESSIBILITY

Reach great heights safely thanks to PPE and safety procedures.

COMMON USE

Easy to find and rent.

EASY ACCESS TO PALLETS

Access to packages on each pallet, making it easy to count them if necessary.

DETAILED VISUAL CHECKS

Operators can perform detailed visual checks on goods and shelves.

DISADVANTAGES

DRONES

IMPOSSIBLE TO HANDLE

Drones cannot **move packages** or affect **labeling**.

COUNTING LIMITATION

Drones are **unable to count packages on opened pallets** stored in high racks.

PREPARATION REQUIRED

A **few days' preparation is required, and is included in the inventory service package.**

ENVIRONMENTAL LIMITATIONS

Drones may not yet be able to operate in certain warehouses **with complex, congested or negative-temperature environments.**

SCISSOR LIFTS

HIGH COSTS

Rental and transport costs are high. Additional spare units may have to be rented as a precaution.

DUAL OPERATOR

To operate safely and in compliance with regulations, it is **necessary to have one operator with an up-to-date CACES for driving, and one for stocktaking.**

DIMENSIONS

Aerial platforms are bulky and **difficult to maneuver, and need to be stored and loaded before and after stocktaking.**

AVERAGE PRODUCTIVITY

Productivity for checking each location is **average: 75 to 100 locations per hour, or 37 to 50 per hour per person.**

LIMITED ACCESSIBILITY

May not be able to reach certain confined or hard-to-reach areas.
